build

"The telos of an acorn is to become an oak tree"

- Aristotle

LOGOS

Telos.Build is a fundraising platform exclusively for the TelosEVM. The Telos. Build Dapp allows users to propose new or existing projects with a title, description, cover image, duration (in days), funding goal (in telos), project link, and with a refundable or non-refundable policy. If a project reaches its funding goal or is non-refundable, the creator can claim funds on the project's page at the end of the proposed duration. If the owner chose a refundable policy, and the funding goal is not reached, contributors can claim their contribution, receiving all of their vested funds. Contributors are tracked on the project's page for airdrops or project perks, but updates will allow creators and contributors to have a pre-defined reward for their contribution similar to other fundraising platforms like Kickstarter.

TELOS.BUILD

P A T H O S

The TelosEVM is an amazing blockchain environment for developers both new and experienced. The goal of the Telos.Build platform is to allow developers to not only showcase their idea but to also receive support from the amazing Telos community. This can be the primary source of funding for a new project or subsequent funding for an existing project. For now, the Telos.Build categories include Defi, NFT, Gaming, Social, and Other. The speed and fees of TelosEVM make this all possible and create a great user experience for this type of Dapp. In addition, Telos.Build has incorporated the design language of telos to create an authentic front-end that will continue to be refined to compliment the TelosEVM.

Our mission is to create fun, and sometimes innovative DAPPs that show off the Telos EVM, while also encouraging $TLOS adoption and trading volume.

-Dummy.Finance

E T H O S

Before creating Telos.Build, the team embedded themselves with the Telos community with their project https://dummy.finance. Since then, dummy.finance has contributed to the telosscan front-end, omnidex, and has built a reputation for being an honest development team committed to the telosEVM ecosystem. For Telos.Build, we wanted to make something selfless that would build on the qualities of the Telos community and contribute to the effort of launching new exciting projects on the TelosEVM. Our team is dedicated to our mission of "creating fun, and sometimes innovative dummy DAPPs that show off the Telos EVM, while also encouraging $TLOS adoption and trading volume." We think that Telos.Build is a great step in this direction. Any contest rewards would be used to build upon this testnet version 1.0 to make a fully flushed out launchpad. under the telos.build domain.

ROADMAP 2022

Q1

- Launch app
- Enter hackathon
- Build on Testnet

Q2

- Partnerships
- Marketing
- Continue to add features to testnet Dapp
- Launch on mainnet

Q3

- Launch a major project with exlcusive partnership
- Telos.Build grants
- Telos.Build NFT platform?

Q4

- Hit goal of 1 Million Telos raised!
- Official TelosEVM partnership

Thank you for your consideration!
- Telos.Build TEAM
